

Detach an EBS Volume:

The screenshot shows the AWS Management Console interface for the 'Volumes (1/2)' page. The left sidebar contains navigation links for EC2 Dashboard, EC2 Global View, Events, Instances, Instance Types, Launch Templates, Spot Requests, Savings Plans, Reserved Instances, Dedicated Hosts, and Capacity Reservations. The main content area displays a table of volumes. The first volume, 'vol-0c7a1d4e76f3019c1', is selected. The 'Actions' dropdown menu is open, showing options: Modify volume, Create snapshot, Create snapshot lifecycle policy, Delete volume, Attach volume, Detach volume, Force detach volume, Manage auto-enabled I/O, Manage tags, and Fault injection. The 'Detach volume' option is highlighted. Below the table, the details for the selected volume are shown: Volume ID: vol-0c7a1d4e76f3019c1, Size: 8 GiB, and Volume status: OK.

The screenshot shows a confirmation dialog box titled 'Detach vol-0c7a1d4e76f3019c1?'. The dialog contains the following text: 'After you detach a volume, you might still be charged for volume storage. If you no longer need the volume, delete it to stop incurring charges.' and 'Are you sure that you want to detach volume vol-0c7a1d4e76f3019c1?'. At the bottom right of the dialog are two buttons: 'Cancel' and 'Detach'.
